A SIMPLE RULE FOR ACCURATELY COMPUTING INTEREST  
AT ANY GIVEN PER CENT. FOR ANY  
LENGTH OF TIME.

Multiply the *principal* (amount of money at interest) by the *time reduced to days*; then divide this *product* by the *quotient* obtained by dividing 360 (the number of days in the interest year) by the *per cent.* of interest, and the *quotient thus obtained* will be the required interest.

## ILLUSTRATION.

Required the interest of \$462.50 for one month and eighteen days at 6 per cent. An interest month is 30 days; one month and eighteen days is equal to 48 days. \$462.50 multiplied by 48 gives \$222.0000; 360 divided by 6 (the per cent. of interest) gives 60, and \$222.0000 divided by 60 will give you the exact interest, which is \$3.70. If the rate of interest in this example were 12 per cent., we would divide the \$222.0000 by 30 (because 360 divided by 12 gives 30); if 4 per cent., we would divide by 90; if 8 per cent., by 45, and in like manner for any other per cent.

### MASONS' AND BRICKLAYERS' WORK.

Masons' work is measured either by the cubic feet or the perch. The perch is 16½ feet long, 1½ feet wide, and 1 foot deep, and therefore contains 24½ cubic feet. To find the number of perches in a piece of masonry, we find the contents of the wall in cubic feet and divide by 24½.

## TROY WEIGHT.

By this weight gold, silver, platina and precious stones (except diamonds) are estimated.

20 mites....	1 grain.	20 pennyw'ts....	1 ounce.
20 grains. .	1 pennyw't.	12 ounces.....	1 pound.

Pure gold is 24 carats fine. The U. S. Standard for gold coin is nine-tenths pure gold.

The term carat is also applied to a weight of  $3\frac{1}{2}$  grains troy, used in weighing diamonds: it is divided into 4 parts called *grains*;  $3\frac{1}{2}$  grains troy are thus equal to 4 grains diamond weight.

## APOTHECARIES' FLUID MEASURE.

The standard bushel of the United States contains 2150.4 cubic inches. The "Imperial bushel" is about 68 cubic inches. Any box or measure, the contents of which are equal to 2150.4 cubic inches, will hold a bushel of grain. In measuring fruit, vegetables, coal and other substances, one-fifth must be added. In other words, a peck measure five times even full makes one bushel. The usual practice is to "heap the measure.

### WHAT CONSTITUTES A CARLOAD.

In general, 20,000 pounds is a carload, of 70 barrels of salt, 70 of lime, 90 of flour, 60 of whisky, 200 sacks of flour, 9 cords of hard wood, 7 of soft, 18 to 20 head of cattle, 50 to 60 head of hogs, 80 to 100 head of sheep, 6,000 feet of solid boards, 17,000 feet of siding, 13,000 feet of flooring, 40,000 shingles,  $\frac{1}{2}$  less hard lumber,  $\frac{1}{4}$  less green lumber, 1-10 less of joists, scantling, and all other large lumber, 340 bushels of wheat, 360 of corn, 680 of oats, 400 of barley, 360 of flax seed, 360 of apples, 480 of Irish potatoes, 360 of sweet potatoes, 1,000 bushels of bran. The foregoing table may not be exactly correct, for the reason that railroads do not exactly agree in their rules and estimate, but it approximates so closely to the general average that shippers will find it a great convenience as a matter of reference.

When the night =

about 8 o'clock  
Commenced ringing  
at which the Indians

to know when preaching  
would begin - So I prepared  
for them the first service  
ever held in the  
place. This  
represented the  
meeting

JULY 13.

As the Steamer was about  
to leave, we piled up our boxes  
of night on the wharf, window  
sashes &c in such shape that  
we could cover them with  
loose boards & make a shelter  
within this pile, we lay  
our blankets & thus camped  
on the wharf, for a week  
until the Steamer came  
by which we were trans-  
ported to Chilcat.

At first thought of placing it to the north east of Trading post in a beautiful grove of Evergreen - but afterward decided on a site to the north west of School house - set the Carpenter to digging to see if the soil was indications of water. Found water at depth of about 4 feet.

just above the glacier on  
the last bank was high rocks  
from which an Indian girl fell into  
the river & was drowned. We also  
passed a high rock bluff upon  
which in early days the Indians  
had a fort. The river is
